

# Webnox Official Documents and Training Resources

Webnox Technologies does not appear to publish any standalone “model training” or course materials on its website. The only PDF we found on the official site is a general **Company Portfolio** brochure (15 pages, dated 2022) which outlines Webnox’s history, services and stats. For example, this portfolio introduces Webnox’s founding vision and lists their core services (“Web Design & Development, Software Development, Enterprise Mobile App Development, Digital Marketing, SaaS Development” etc.) <sup>1</sup>. The PDF is available for download from Webnox’s site at:

<https://webnox.in/wp-content/uploads/2022/10/webnox-technologies-company-portfolio-coimbatore.pdf>. However, it contains only high-level company info and **does not include any specific AI/ML training curriculum or model-training content**.

Webnox’s online materials do mention AI and machine learning as part of their offerings, but again no training syllabus is provided. For instance, a blog on their site notes that leveraging “latest technologies, such as AI, machine learning, or blockchain” can give businesses a competitive edge <sup>2</sup>. Likewise, their **AI Agent Development** page describes AI “agents” and learning systems (e.g. goal-based, hierarchical agents) but does not link to any downloadable courseware or training guide.

Webnox does promote a **Learning Management System (LMS)** product, suggesting they can support corporate and educational training. Their LMS page highlights features like employee onboarding programs, compliance training, sales training, partner training, etc. <sup>3</sup>. While this shows Webnox can deliver custom training platforms (“LMS for Corporates” with modules to “Onboard new comers and assign training programs”, “Sales Training to teach sales reps”, etc.), **no curriculum PDFs or course outlines are provided for ML/AI**. In short, aside from the corporate brochure PDF <sup>1</sup>, we found **no downloadable documents** (course outlines, case-study PDFs, or brochures) on the Webnox site that specifically cover machine learning, AI, or data-science training programs.

**Sources:** Webnox’s official portfolio PDF <sup>1</sup> and web pages on their services and LMS <sup>2</sup> <sup>3</sup>. These confirm the content and available downloads (and the absence of any ML training documents).
