

Online Counseling Platform

Develop an online counseling platform that connects clients with licensed counselors through secure video calls, chat, and email. Implement features for scheduling appointments, managing client records, and offering various counseling services, including mental health, relationship advice, and career counseling. Include tools for secure communication, session notes, and payment processing.

What to do?

Counselor and Client Interaction:

- Develop a system to connect clients with licensed counselors for secure video calls, chat, and email communication.
- Implement secure video call functionality using services.
- Provide a chat interface for real-time messaging and email integration for communication outside of sessions.

Appointment Scheduling:

- Create a scheduling system that allows clients to book appointments with counselors based on availability.
- Implement features for clients to select session types (e.g., mental health, relationship advice, career counseling).
- Provide counselors with tools to manage their schedules and availability.

Client Records Management:

- Develop tools for managing client records, including personal information, session history, and notes.

Counseling Services:

- Offer a range of counseling services, including mental health, relationship advice, and career counseling.
- Allow counselors to create and manage profiles detailing their expertise and services offered.

Session Notes:

- Provide tools for counselors to take and manage session notes, including text and file attachments.
- Ensure session notes are securely stored and accessible only to authorized users.

Payment Processing:

- Integrate payment processing functionality to handle client payments for sessions.
- Implement secure payment gateways for handling transactions.

User Interface:

- Design an intuitive interface for clients to easily find and book counselors, manage appointments, and access communication tools.
- Provide a user-friendly dashboard for counselors to manage their schedules, client records, and session notes.

Techstacks needs to be used:

- MERN stack
- TailwindCSS for styling
- Video call integration

- Payment gateway integration

How do I submit my work?

- Deploy your web application using Netlify (<https://www.netlify.com>), Render (<https://www.render.com>).
- Push all your work files to GitHub.
- Submit your URLs in the portal.

Terms and Conditions:

- You agree to not share this confidential document with anyone.
- You agree to open-source your code (it may even look good on your profile!).
Do not mention our company's name anywhere in the code.
- We will never use your source code under any circumstances for any commercial purposes; this is just a basic assessment task.
- NOTE: Any violation of Terms and conditions is strictly prohibited. You are bound to adhere to it.
